DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group III including claims 8-19 in the reply filed on 05/02/2005 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 8-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8, line 5: "first structure" is vague and indefinite because it is unclear as to what structure applicant is referring, there is no structural/functional relationship of the first structure with respect to the claimed bottle control apparatus and/or the bottle.

Claim 8, line 6: "second structure" is vague and indefinite because it is unclear as to what structure applicant is referring, there is no structural/functional relationship of the second structure with respect to the claimed bottle control apparatus and/or the bottle.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3721

5. Claims 8, 9 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Peronek et al. (US 4,939,890).

With respect to Claim 8, Peronek discloses an apparatus for bottle capping including: a groove formed between a neck guide (90) and a neck block (97) (see FIGs. 1 & 2), and lifter ring support (81) mounted on rotary hub (40).

With respect to Claim 9, the groove and the lifter ring support are capable of causing a bottle (10) to rotate.

With respect to Claim 13, the groove is fixed formed on the neck guide (90).

Allowable Subject Matter

6. Claims 14-19 are allowed over the prior art of record. The prior art of record fails to disclose and/or teach a bottle control apparatus for a capping machine that comprises in combination a spin control guide mounted to a stationary support structure, wherein the spin control guide includes a frictional controlling groove that is adapted to engage a lifter ring of a bottle to be capped; and a support slide plate mounted to a rotating support structure; wherein the combination of the movement of the rotating support structure in relation to the stationary support structure and the frictional engagement of the lifter ring against the spin control guide causes the bottle to spin.

7. Claims 10 and 12 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure has been cited on form PTO-892 along with the applied references.
